

# SMACC INTEGRATED MANAGEMENT AND SUSTAINABILITY POLICY

Marcegaglia Stainless Sheffield Limited's operations at the SMACC (Stainless Melting and Continuous Casting) site in Sheffield, UK, produces sustainable semi-finished stainless and high alloy steel products in the form of slabs, blooms, billets, and ingots for a global market. In line with Marcegaglia group policies on sustainable development, corporate responsibility, and Environment, Health, Safety and Quality (EHSQ), we commit to comply with all relevant legislation, to meet our obligations, and to continually monitor & improve our performance. We recognise that the effective, integrated management of health, safety, environment, and quality is fundamental to the successful operation of any business.

## Health and Safety

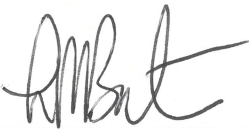

We are firmly convinced that all injuries can be prevented, and that **safety takes priority** over all other activities. We are committed to eliminating or minimising work-related illness and injury, by adopting a positive safety culture throughout site. We will satisfy all applicable legal and relevant requirements and will involve employees in setting health and safety objectives. We are committed to improving the work environment, occupational health, and wellbeing of our employees and contractors, which extends to all site visitors as appropriate.

## Environment and Sustainability

Sustainability is at the heart of Marcegaglia. Our products are fully recyclable and are produced using recycled steel as the primary raw material. The products that are made from our material are valuable for customers and society, supporting wider sustainability goals. Our focus at SMACC is to provide this positive contribution to society whilst having the minimum impact on the local and global environment. We are committed to protecting, and where possible enhancing, the environment by preventing pollution, fulfilling all legal and other compliance obligations, and through the setting of ambitious targets.

## Quality

Products originating from SMACC can be found in the most testing of environments and their integrity in use is paramount. We aim to become, and remain, the preferred choice of customers through quality of product, technical service, and price competitiveness whilst satisfying the identified needs of interested parties. We shall comply with all relevant quality standards, codes, regulations, and customer specification requirements. We will monitor our quality performance, customer satisfaction, and global market requirements, and use the outcomes to steer continuous improvement activities and product development.
